CONTENTS

Volume I, Issue Nos. 1–6

International Journal of
QUANTUM CHEMISTRY

Issue No. 1, January

Per-Olov Löwdin: Program 1

Per-Olov Löwdin: Nature of Quantum Chemistry 7

W. Heitler: Quantum Chemistry: the Early Period 13

John C. Slater: The Current State of Solid-State and Molecular Theory . 37

Robert S. Mulliken: The Assignment of Quantum Numbers for Electrons in Molecules 103

Announcement 119

Information for Contributors 121

Issue No. 2, March

Hélène Berthod, Claude Giessner-Prettre, and Alberte Pullman: Theoretical Study of the Electronic Properties of Biological Purines and Pyrimidines. II. The Effect of Configuration Mixing 123

R. Gáspár: Many-Electron Problems. I. Energy Relations in the Theory of Neutral Atoms 139

Stig Flodmark: A Data Programme for Population Analysis of Crystal-Band Structures 147

A. Dalgarno, I. H. Morrison and R. M. Pengelly: Long-Range Interactions Between Atoms and Molecules 161

W. Kołos: Long-Range Interaction Between $1s$ and $2s$ or $2p$ Hydrogen Atoms 169

Sadhan Basu: A Tomonaga Gas Model for Aromatic Hydrocarbons . . 187

Chr. Klixbüll Jørgensen, Sally M. Horner, William E. Hatfield, and S. Y. Tyree, Jr.: Influence of Madelung (Interatomic Coulomb) Energy on Wolfsberg–Helmholz Calculations 191

Issue No. 3, May

Harald H. Nielsen: Anomalies in the Intensity Distributions of Rotation–Vibration Lines in the Spectra of Polyatomic Molecules 217

H. D. Försterling, W. Huber, and H. Kuhn: Projected Electron Density Method of π-Electron Systems. I. Electron Distribution in the Ground State 225

C. Alden Mead and Albert Moscowitz: Dipole Length Versus Dipole Velocity in the Calculation of Infrared Intensities with Born–Oppenheimer Wave Functions 243

R. C. Sahni and B. C. Sawhney: Quantum-Mechanical Treatment of Molecules. I. Calculations of the Potential Energy Curves and Molecular Constants of the Ground and Ionized States of N_2 251

S. M. Blinder: Energy Eigenvalue Spectroscopy 271

S. M. Blinder: Spectral Analysis of the Green's Function 285

Giuseppe Del Re: On the Choice and Definition of Atomic-Orbital Bases. I. General Considerations; Promotion and Hybridization; Electric Dipole Moments 293

Issue No. 4, July

Adolfas Pranaitis Jucys: On the Extended Method of Calculation of Atomic Structures. 311

Y. Y. Dmitriev and M. S. Yuriev: Variational Principle for the Intensity of Forbidden Transitions 321

G. Bessis, C. Murez et S. Bratož: Méthode des Biorbitales: Application Préliminaire au Calcul de l'Energie de l'Etat Fondamental de l'Atome de Beryllium 327

C. A. Coulson and A. Joseph: A Constant of the Motion for the Two-Centre Kepler Problem 337

H. Preuss und G. Diercksen: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. I. Das Cyclopentadienylanion ($C_5H_5^-$) 349

G. Diercksen und H. Preuss: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. II. Das Benzol (C_6H_6). 357

H. Preuss und G. Diercksen: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. III. Das Cyclopropan (C_3H_6) 361

G. Diercksen und H. Preuss: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. IV. Das Äthylen (C_5H_4) 365

H. Preuss und G. Diercksen: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. V. Bindungsbeteiligung der Inneren Elektronen des C-Atoms 369

R. Janoschek, G. Diercksen und H. Preuss: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. VI. Das Methan (CH_4) 373

Oskar E. Polansky und Gerhard Derflinger: Zur Clar'schen Theorie Lokaler Benzoider Gebiete in Kondensierten Aromaten 379

Roland Lefebvre and Yves G. Smeyers: Extended Hartree–Fock Calculations for the Helium Ground State 403

M. M. Mestechkin: Two-Particle Density Functions for a Spin-Projected Single Slater Determinant 421

Jean-Marie André, Louis Gouverneur, et Georges Leroy: L'Étude Théorique des Systèmes Périodiques. I. La Méthode LCAO–HCO 427

Jean-Marie André, Louis Gouverneur, et Georges Leroy: L'Étude Théorique des Systèmes Périodiques. II. La Méthode LCAO–SCF–CO 451

W. Byers Brown and G. V. Nazaroff: The Perturbation Theory of the Extended Hartree–Fock Approximation for Two-Electron Atoms . . . 463

H. Primas: A Density Functional Representation of Quantum Chemistry. I. Motivation and General Formalism 493

ISSUE No. 5, September

Charles E. Reid: Transformation of Perturbation Series into Continued Fractions, with Application to an Anharmonic Oscillator 521

A. Joseph: The Theory of Local Degeneracy 535

V. A. Kuprievich: SCF–CI and SCF Open-Shell Studies of the Base Components of the Nucleic Acids. 561

Herbert A. Pohl and L. M. Raff: Simplified SCF Calculations for σ-Bonded Systems. II. The Interhalogens. 577

Purnendra Nath Sen and Sadhan Basu: Free-Electron Model for the Inelastic Collision of Fast Electrons with Benzene 591

L. L. Boyle: The Polarization Phenomena of Spherical Molecules . . . 595

H. Preuss und G. Diercksen: Eine Rechenzeitsparende Programmierung des Wellenmechanischen Self-Consistent-Field Verfahrens für Moleküle (SCF–MO–LCGO–Verfahren) 605

A. Joseph: On the Determination of the Exact Number of Bound States of a Given Potential. I. General Method 615

H. Preuss und G. Diercksen: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. VII. Das System $(LiH_2)^-$ 631

G. Diercksen und H. Preuss: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. VIII. Das System $(Li_2H)^+$ 637

H. Preuss und G. Diercksen: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. IX. Das System $(Li_2H)^-$ 641

G. Von Bünau, G. Diercksen und H. Preuss: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. X. Das Methylkation $(CH_3)^+$ 645

R. Janoschek, H. Preuss und G. Diercksen: Wellenmechanische Absolutrechnungen an Molekülen und Atomsystemen mit der SCF–MO–LC(LCGO) Methode. XI. Das Hydroxylanion $(OH)^-$ 649

Jiří Čížek et Alain Pellégatti: Calcul de l'Énergie de Corrélation pour l'État Fondamental de la Molécule d'Acétylène 653

Claudette Barbier and Gaston Berthier: Symmetry Components Analysis of Nuclear Spin–Spin Coupling Constants 657

M. M. Mestechkin: The Density Matrix of the Two-Particle Function Method 675

Y. I'Haya: Magneto-Optical Rotation in Molecules. IV. The Verdet Constant for the Nitrogen Molecule 693

Pill-Soon Song and Thomas A. Moore: Molecular-Orbital Studies of the Mechanism of Xanthine Oxidase-Catalyzed Oxidation of Purines, Especially 2-Chloropurine 699

Issue No. 6, November

D. C. Jain and R. C. Sahni: Einstein *A* Coefficients, Oscillator Strengths, and Abolute Band Strengths for the First Negative System, and Franck–Condon Factors for the Second Negative System of N_2^+ 721

K. M. S. Saxena and P. T. Narasimhan: Hartree–Fock–Slater Wave Functions and Magnetic Properties of Atoms and Ions 731

P. Claverie, S. Diner and J. P. Malrieu: The Use of Perturbation Methods for the Study of the Effects of Configuration Interaction. I. Choice of the Zeroth-Order Hamiltonian 751

O. Goscinski: Continued Fractions and Upper and Lower Bounds in the Brillouin–Wigner Perturbation Scheme. 769

R. B. Gerber: Variational Properties of Adiabatic Molecular Wave Functions and Their Generalization for Collision States 781

L. B. Rédei: Application of the Partitioning Technique to Scattering Problems in the Theory of Nonrelativistic Fermion–Boson Quantum Fields 799

Friedrich Franz Seelig: On the Modulation of Molecular Wave Functions by the Potential. I. General Form of the Spinless Wave Functions with Correct Behaviour at the Simple Coulombic Singularities 809

M. Tomášek: Surface States in a Simple Crystal Model. 829

Peter Lindner and Sten Lunell: On the Choice of Spin Functions in the AMO Method 841

Erkki Brändas: Scaled AMO Calculations on the Hydrogen Molecule. I. The $1s\sigma 2p\sigma {}^3\Sigma_u^+$ State 847

E. A. Pshenichov and N. D. Sokolov: Effect of the Hydrogen Bond and the Solvent on the Kinetics and Mechanism of Intermolecular Proton Transitions. 855

R. Daudel, F. Gallais and P. Smet: On the General Theory of Molecular Additivity Rules: The Particular Case of the Faraday Effect 873
